

Dingwall Sample PDF

In my years in the guitar repair business, I constantly had to deal with humidity-related problems made worse by our local climate's colossal temperature and humidity swings. Simple design changes and material choices could have minimized many of these problems. Touring musicians are constantly amazed at how stable Dingwall instruments are.

We've experimented with many different laminations and have found a 5-piece maple construction to be among the most reliable. Years of experience have proven this design to be extremely stable and reliable.

We offer a 5-piece laminated wenge and roasted Ash neck options.

We take neck construction very seriously due to our extensive experience in guitar repairs coupled with our geographic location and extreme climate.

Touring musicians are constantly amazed at how stable Dingwall instruments are. Many states that their Dingwall's necks are as stable as their graphite-necked instruments. We've experimented with many different laminations and have found a 5-piece maple construction to be among the most reliable. Years of experience have proven this design to be highly stable and reliable.

We offer a 5-piece laminated wenge neck as an option. Wenge is also very stable. A wenge neck will be roughly 50 grams heavier than maple with an open grain feel. The tone is similar to maple but with a slightly snappier response.
